

The **PRO ElecDT<sup>®</sup> 2000**  
A NEW AGE IN ELECTROMEDICINE

The **PRO ElecDT<sup>®</sup> 2000**  
A NEW AGE IN ELECTROMEDICINE

**CLINICAL USAGE:**

- Stimulate peripheral and motor nerves (therapeutically) with and during the physical | functional rehabilitative process;
- Assist with acute, subacute and complex chronic painful conditions with and during the physical | functional rehabilitative process;
- Assist with pre and | or postoperative musculoskeletal conditions, i.e., musculoskeletal pain and dysfunction whether arising from a post-traumatic or non-post-traumatic event with and during the physical | functional rehabilitative process;
- Improve with therapeutic progression the integrity of the hypertonic (somatic) tissue integrity (reduce the intensity of muscle spasms) with and during the physical | functional rehabilitative process;
- Prevent and improve with therapeutic progression hypotonic (somatic) tissue integrity (atrophied muscle tissue);
- Achieve with therapeutic progression muscle re-education with and during the physical | functional rehabilitative process;

- **Increase local blood circulation;**
- **Improve and | or maintain Active and Passive Ranges of Motion with, by and through prescribed | specific treatment programs directly and collectively affecting the musculoskeletal structure and system with and during the physical | functional rehabilitative process;**

#### **CLINICAL BENEFITS:**

- **Non-invasive, non-toxic, safe and effective;**
- **Negligible side effects, safe and effective;**
- **Noteworthy patient compliance and satisfaction, safe and effective;**
- **Simple but powerful technology | conveniently administered, safe and effective;**

#### **SYSTEM DESCRIPTION:**

Vasopneumatic delivery of auricular electrostimulation, H-Wave stimulation (H-Wave®), interferential stimulation therapy, microcurrent electrical nerve stimulation, pulsed electrical stimulation (including pulsed electromagnetic field stimulation), percutaneous neuromodulation therapy, supraorbital transcutaneous neurostimulation, and sympathetic therapies.

**The PRO ElecDT® 2000 system utilizes the internationally patented HORIZONTAL therapy.**

Programmed ready, operation allows the physician the choice of a variety of pre-programmed treatment protocols; also, this technology allows customized therapeutic treatment protocols.
